

EARLY VEG - WEEK 1

HOW TO IRRIGATE

Irrigation Style:
Vegetative

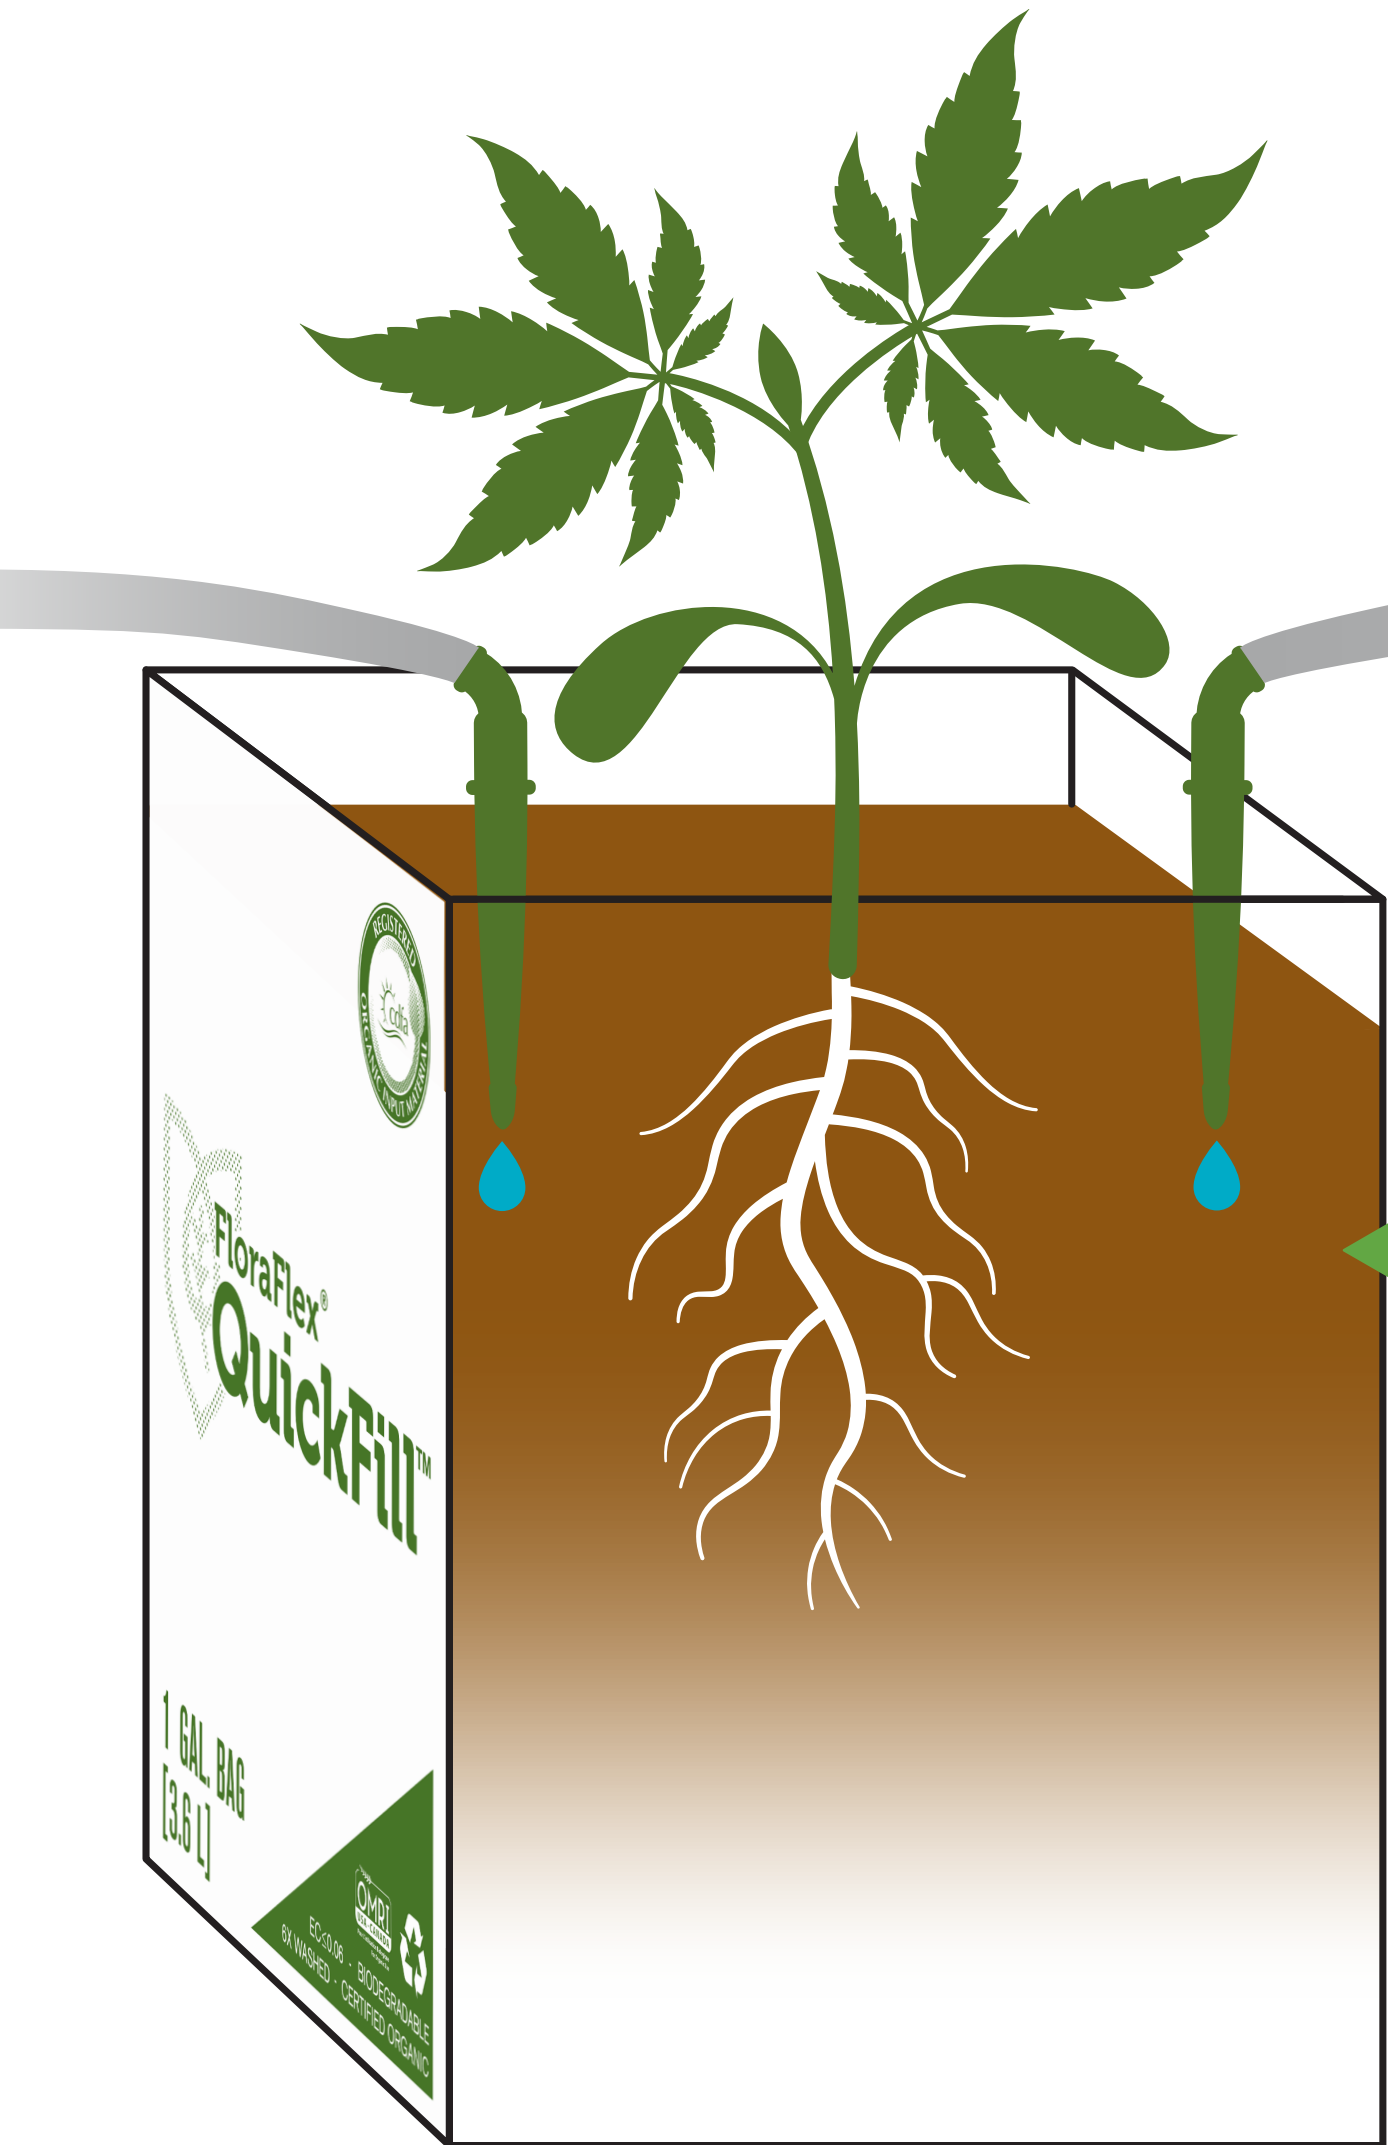

Initial Dryback Before First Irrigation:
10-15%

Replenishment Shot Size:
1-3% of the pot/cubes volume.

Replenishment Shot Frequency:
Start 1-3 hours after lights on. Every 15 minutes until runoff is achieved.

Refreshment Shot Size:
2-3% of the pot/cubes volume.

Refreshment Shot Frequency:
Every 1-3 hours after replenishment shots have finished. Looking for a 2-3% dryback between irrigations. You will not always need refreshment shots. Stop waterings atleast 1-3 hours before lights out.

FEEDING SCHEDULE

5g Per Gal

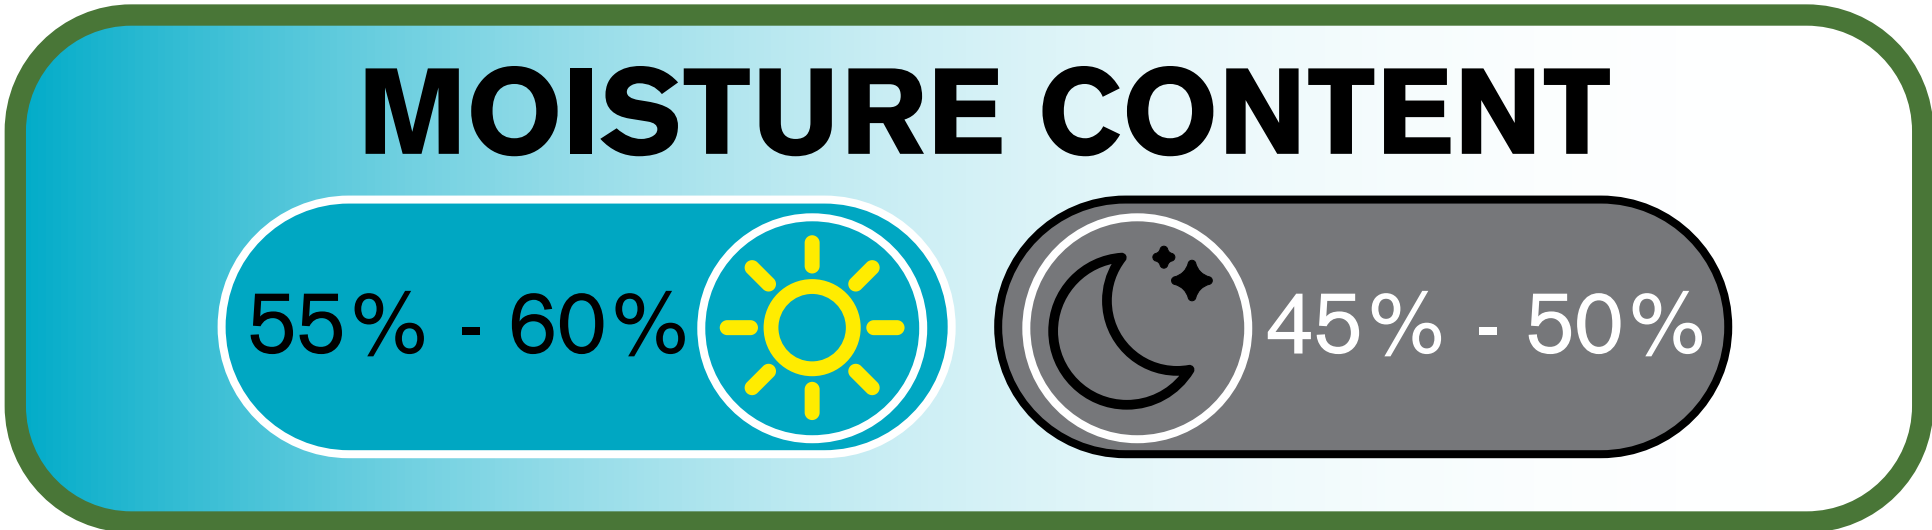

5g Per Gal

1mL Per Gal

OVERNIGHT DRYBACKS
10% - 15%

*We recommend using a soil moisture sensor for accurate moisture percentage readings in the growing medium. FloraFlex Coco has max water holding capacity of 60%.
