

TRIM / CURE

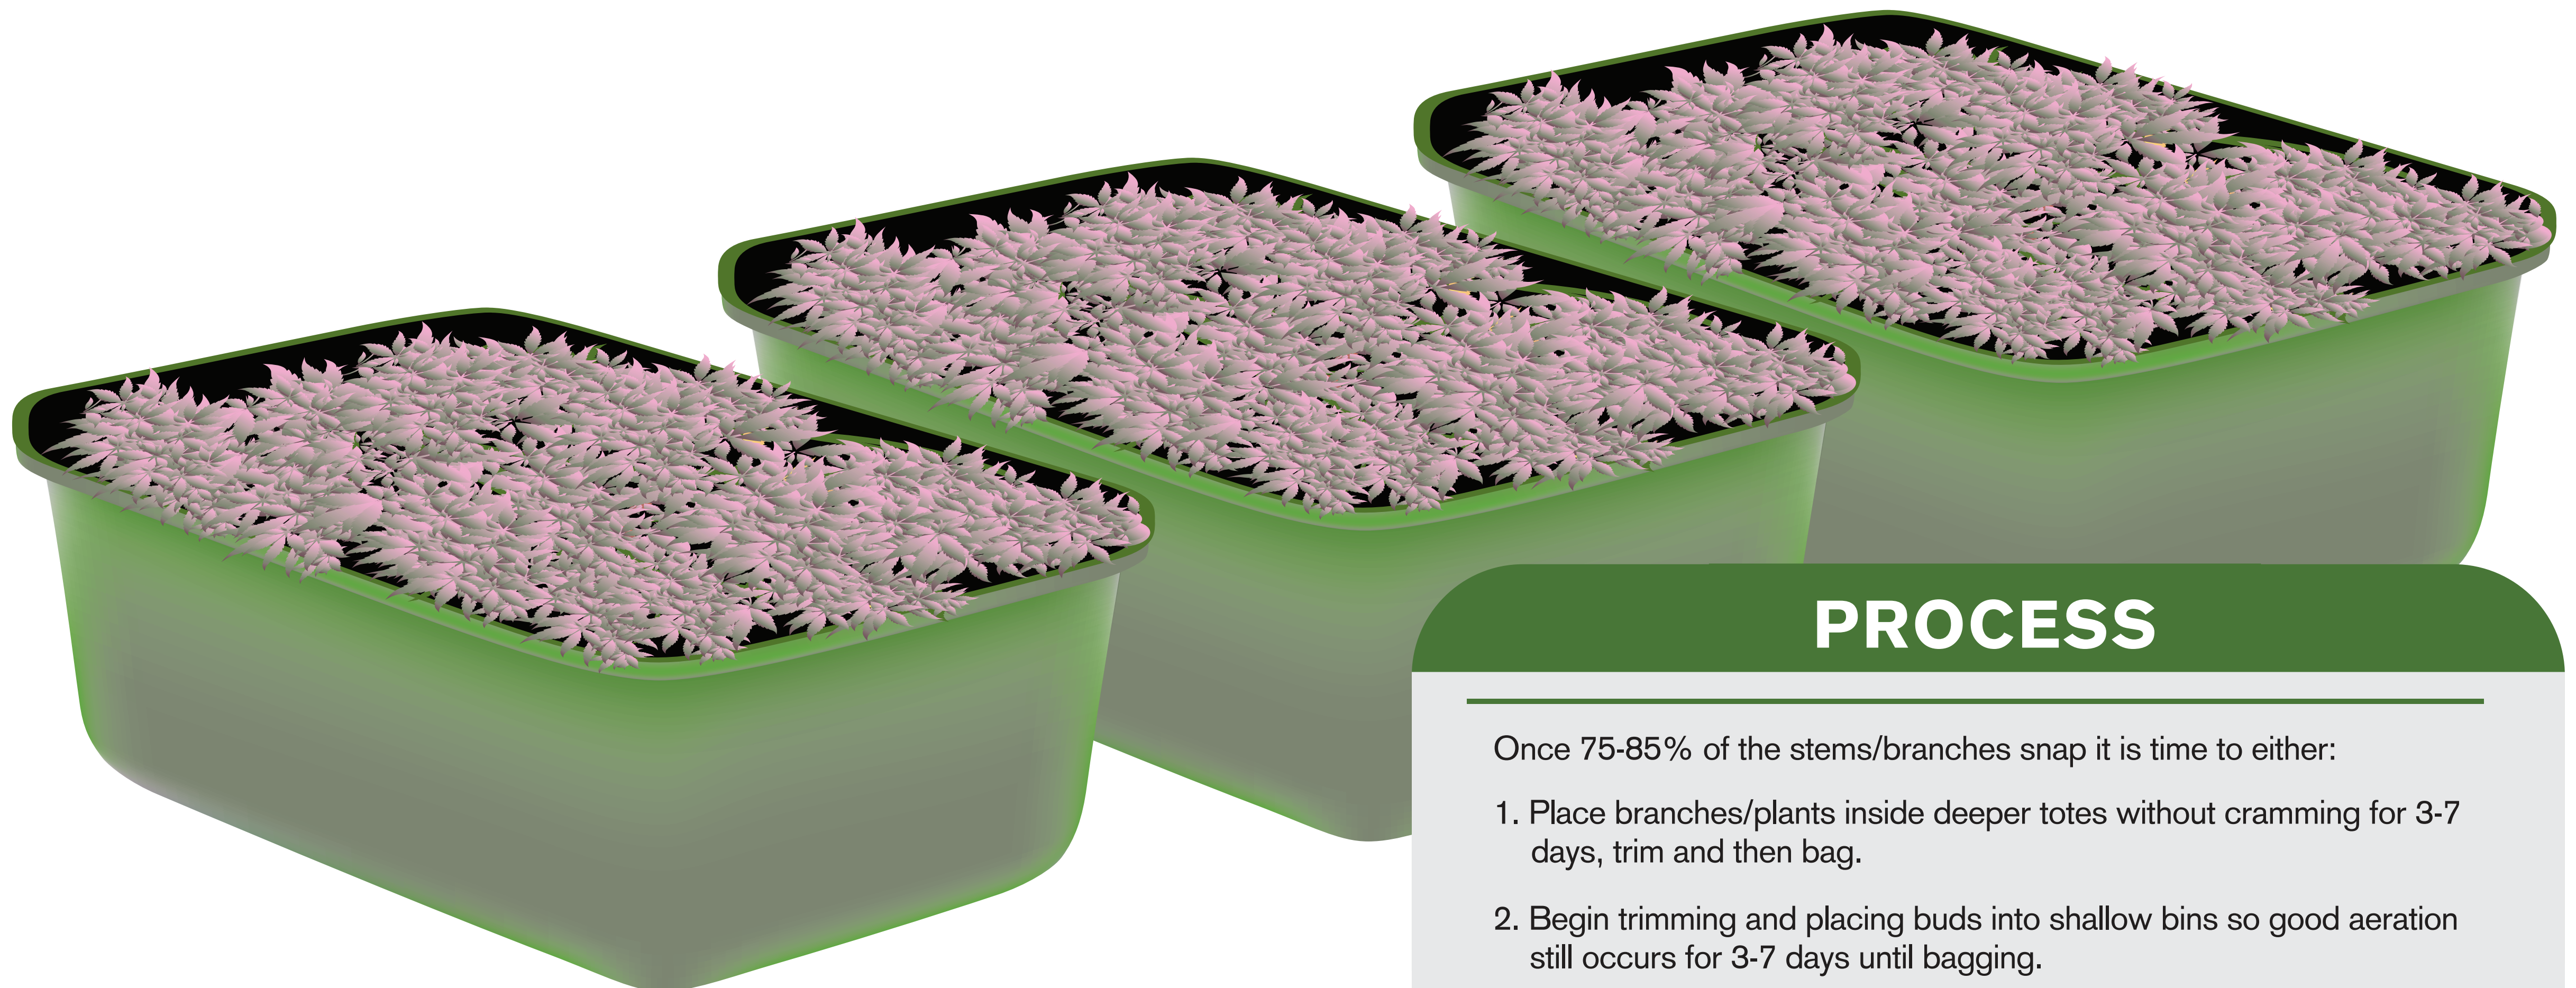

LIGHTS OFF

55° - 65° F

55% - 65%

PROCESS

Once 75-85% of the stems/branches snap it is time to either:

1. Place branches/plants inside deeper totes without cramming for 3-7 days, trim and then bag.
2. Begin trimming and placing buds into shallow bins so good aeration still occurs for 3-7 days until bagging.

Burping/opening Turkey/Oven Bags daily is common practice.

Ideally you will match your temp to humidity anywhere within this range.
